

NFT PUZZLE WHITE PAPER

Discover rare pieces of the Changing World
with NFTPuzzle on the BEP20 network.

WHAT IS

WHITE PAPER?

A white paper is an informational document usually issued by a company or not-for-profit organization to promote or highlight the features of a solution, product, or service that it offers or plans to offer. “White paper” is intended to be used as a pre-sales marketing tool and not as a user manual or other technical document developed to support the user after a purchase. In particular, every Initial Coin Offering (ICO) in the cryptocurrency market needs a white paper to run a successful campaign. In this context, “white paper” is an important document that describes the outline of a problem that the project intends to solve, solution methods, a detailed description of its products, its architecture, and how it will interact with users.

ABOUT

NFTPUZZLE

NFT Puzzle runs on the BEP20 network. It offers its users a marketplace and swap project. It aims to provide passive income to holders with NFT collections to be created. It also gives you 2% NFTPuzzle per transaction.

How about owning part or all of a great work? NFTPuzzle brings the classic puzzle structure to the blockchain network. You can catch the advantages by having Puzzle collections that will be published regularly every month. Remember that a puzzle that is missing a single piece always needs the last piece, and this last piece is always the most valuable.

ABOUT

MARKETPLACE

A trusted marketplace where digital artists can sell their NFT designs.

Commission Burning

20% of the commission received for each transaction made on the Marketplace will be automatically burned.

Swap With NFTPuzzle Token

The use of NFTPuzzle tokens will be mandatory for purchases. In this way, the token will be a constantly vibrant and strong currency.

Fast and User Friendly

The Market Place interface is designed to be fast and convenient for users. Users will be able to create and trade NFTs in a simple way.

WHAT IS

NON FUNGIBLE TOKEN

A non-fungible token (NFT) is a unique and non-interchangeable unit of data stored on a digital ledger (blockchain). It cannot be copied and it is one of a kind. The unique identity and ownership of an NFT is verifiable via the blockchain ledger. It is defined as a “unique digital asset” that contains an image, audio file, video or evidence of the digital equivalent of a physical asset. NFT’s has been built on Ethereum in 2017 and began to be included in projects using many infrastructures such as BEP-20 and AVAX. The most well-known NFT marketplaces are OpenSea, Mintable, Nifty Gateway and Rarible. NFT has become one of the most popular topics in the cryptocurrency world in 2021. Today, NFT’s are widely used for digital artworks. NFT market cap has tripled in 2020 to over 250 million dollars. In the first quarter of 2021, NFT sales exceeded 2 billion dollars, more than 20 times the volume of the previous quarter.

NFT

MARKETPLACE

NFTs are virtual tokens that represent ownership of something inherently distinct and scarce, whether it be a physical or digital item, such as artwork, a soundtrack, a collectible, an in-game item or real estate. Unlike regular cryptocurrencies like bitcoin or fiat money like the U.S dollar, these special types of digital assets cannot be mutually exchanged for one another because each token has a specific value based on its unique traits and attributes. Also, unlike regular cryptocurrencies, NFTs cannot be purchased on centralized or decentralized crypto exchanges. Instead, they are listed and traded on online marketplaces that are specially built for NFTs.

NFT ARTIST

An NFT is a digital asset that exists completely in the digital universe you can't touch it, but you can own it. An NFT can be any type of digital file: an artwork, an article, music or even a meme such as "Disaster Girl", the original photo of which sold for \$500k earlier this year

Although a single person owns the original of NFT, in many sales, the artist continues to own the copyrights of his work, thus retaining the rights to sell copies of it. NFTs can also contain smart contracts. They may include rights to an artist, for example, to receive a share of any future sale.

HOW IT

WORKS ?

Prior to the existence of Cryptocurrency, no one had ever really got to own something that was completely digital. The digital assets passed around videos and motion graphics, repurposing and reposting them, but there wasn't this current opportunity to automatically assume complete, concrete ownership over a digital file or artwork. The rise of NFT's changes this, allowing creators the authority to rent digital artworks out, to sell them or display them how they wish. In order to sell them, designers need to get some kind of 'legal' ownership of their work. So, after NFT art is created, it's 'minted' or tokenized on the cryptocurrency service, Blockchain. The Blockchain is a digital transaction system that records information in a way that makes it very difficult to hack or scam, which means it's extremely useful for tracking copyright ownership and maintaining records of creation. Theoretically, any digital masterpiece you create and mint will lead solely to the creator.
